

## Essential Learning Health System Structures in Primary Care: What Are They and How Did You Implement Them?

### Session Description:

A common problem faced by all is that it takes an average of 12-15 years before the research is taken up into practice. The Canadian Primary Care Research Network is taking leadership to create momentum to learn from and more quickly apply evidence to primary care practice and delivery. This session explores shared solutions for practice-based research and learning networks to: a) use data to study and understand the nature of the problem (advanced analytics and population insight gear) and b) engage with patients, caregivers and clinicians in co-designing solutions using informed local data and high-quality evidence syntheses (patient, caregiver and provider co-design gear).

### Session Objectives:

- Identify essential learning health system structures in primary care.
- Learn how these structures were implemented.

26 March 2024 / 12 - 1 PM ET / [Zoom Meeting](#)

**Jennifer Rayner, PhD**

-Director of Research and Policy at the Alliance for Healthier Communities  
-Research Professor, Western University  
-Associate Professor, U of Toronto

**Mpho Begin**

-Member, CPCRN Patient Advisory Council  
-Member, HDRN Public Advisory Council  
-Member, PAN & CDHE Patient Partner Evaluators

**Terrie Meehan**

-Vice-Chair of the Client and Community Partners Committee with the Alliance for Healthier Communities  
-Inclusive Event Planning and Research Professional and Volunteer  
-Advocate for Housing and Disability Rights
